STEP INTO THE LIGHT!

Just one step
away from a
bright future

Welcome to your future as an expert.

How to present yourself in a proper light.

Tridonic is not just any company but an international autonomous enterprise within the Zumtobel Group. So you should not be just anyone – and you should bring along more than just a willingness to work hard. We expect you to be a focused individual with a healthy interest in power electronics and lighting technology.

Because Tridonic is an international company your studies will also have an international flavour – both during the scholarship phase and afterwards. Originality, creativity and innovative thinking should not be occasional acquaintances but your constant companions.

We place great emphasis on team work so you should be a good team player with outstanding communicative skills. We encourage decisiveness and a hands-on approach. We demand a sense of responsibility even during your studies. This of course means that you should not accept any other grants or scholarships and focus completely on your chosen course of studies.

▼ Tridonic - Facts and figures:

- 2000 employees
- Headquarters in Dornbirn
- 30 separate branch offices, worldwide presence
- More than 200 inventions, more than 2.000 patents
- New products account for more than 40 % of the total

The history of Tridonic is a real success story.

This success has only been possible because the people who work for us are enthusiastic, have the necessary specialist knowledge and enjoy cooperating with one another to achieve their objectives.

This requires active support. We have therefore set up a training programme, that is being offered exclusively through just a few universities world-wide, in the form of sponsorship. This sponsorship is for a discipline that has been close to our heart for years, namely light energy. Tridonic has outstanding employees working in this field throughout the world.

Some of these experts will be available as direct contacts and mentors for sponsored students to help them become experts themselves. After all, this is the only way that the success story of Tridonic can continue.

A few closing comments.

During your studies you will focus on aspects that correspond to the core competencies of Tridonic. Your mentor will then be able to provide you with the relevant support.

During your studies you will focus on special topics that relate directly to our work. During your vacations you will spend 4 to 6 weeks at one of our European offices, gathering valuable practical experience.

Sponsorship involves a compulsory employment contract for at least 6 months at Tridonic after graduation. This is when you can apply the knowledge you have gained and get to know the lighting industry from a different exciting angle. If you think you fit the bill we would love to hear from you.

Step in!

Convince us that you're the right person. Tell us why we should sponsor you in particular. Let us know where you intend your studies to take you and what you expect from Tridonic. Please send your application to Heather Martin – heather.martin@ncl.ac.uk

The enclosed form contains further details.
