Shadowing Week

ACCENTURE GROUP 1
LORYN DAVISON, JAMES WHITMORE, AIZED RATHORE, JACK SWAIN
AppDev and Maintenance

• Support and maintain existing systems
• Often built by delivery team or third party vendors
• Most work and tasks driven by incident/service request queues
• Analysts and problem solvers
• NHSmail
  • Relay
  • Portal
  • SQL & Database
  • AD
Testing

Live, regression and operational testing.

Regression
- Automated testing of regression tests.
- Writing scripts to carryout the testing of applications.
- Running batches on databases and solving problems causing them to fail.

Operational
- Run tests on partitions of the data used by the live testing.
- Focus on performance of the test; how long it took and CPU usage.
- Analyse the results.
- Produce a presentation on important tests.
Innovation

- The purpose of the innovation department was to design and implement new ideas that have never been done before.
- Use of new technologies such as Amazon echo and further developments for google glass.
- Consisted of front-end, back-end and design.
- Went around the teams and observed the different roles and different software used.
- Learned the best practices when designing a website.
Reflections

- Relaxed atmosphere
- Friendly people
- Great explanations
- Future placements
- Developed problem solving skills
