10 Programme Aims

- To produce graduates who will have an understanding of the theory and principles which underlie Computing Science and Software Engineering. They will have knowledge and experience of the fundamental techniques used in requirements analysis, specification, design, development, validation, documentation, maintenance and evaluation of software systems in accordance with modern principles of Software Engineering. They will have skills in the application of these techniques in the development of systems software and software for a range of applications. They will also have an understanding of the architectural concepts underlying the hardware systems on which such software is run. Graduates will have experience of a range of software and hardware systems in current use in the profession, an understanding of current trends in their development, and an appreciation of the professional, ethical and social dimensions of the subject. Graduates will have demonstrated the ability to apply the principles and practices of Computing Science in tackling a significant technical problem; the solution typically demonstrates a soundly based vision of the direction of developments of Computing Science. Graduates will have a good understanding of issues at the forefront of Computing Science and will have a knowledge of up to date tools and techniques. They will be able to critically evaluate and test Computing systems. Many graduates go on to employment in technical positions in software houses and with large-scale users; some graduates pursue research careers. Some students seek to develop market-niche software in small companies.

- To provide a programme which meets the FHEQ at Masters level and which takes appropriate account of the draft subject benchmark statements in Computing.

11 Learning Outcomes

The programme provides opportunities for students to develop and demonstrate knowledge and understanding, qualities, skills and other attributes in the following areas. The programme outcomes have references to the benchmark statements for Computing.

**Knowledge and Understanding**

On completing the programme students should be able to demonstrate knowledge and understanding of:

A1. A high level programming language
A2. A number of applications within Computing Science
A3. The principles of software engineering
A4. Techniques for the development of algorithms for a range of applications
A5. Computer organisation and architectures
A6. Professional issues to cover: social, ethical and legal aspects
A7. Some of the theoretical foundations of Computing Science
### Teaching and Learning Methods
Lectures are the main way of imparting knowledge and understanding (A1-A7). Practical classes feature prominently, especially to support the programming and software engineering modules (A1, A3). Students are expected to contribute to their own learning experience by independent reading. They are provided with references to books which are categorised as essential, recommended, and background reading, as well as scientific papers and other learning materials including appropriate web URLs.

### Assessment Strategy
Knowledge and understanding are assessed by means of closed and open book written examinations, and coursework, including group and individual project reports (A1-A6).

### Intellectual Skills
On completing the programme students should be able to demonstrate skills in:
- B1. The process of software development
- B2. The use of hardware and software systems
- B3. The identification and implementation of appropriate algorithms and data structures
- B4. The use and provision of network information services
- B5. The use of programming languages
- B6. Analysis of system requirements and the production of system specifications

### Teaching and Learning Methods
B1-B6 feature prominently in all modules. In particular a group project gives students experience of working within teams to engineer a complex piece of software (B1-B6). An individual project during Semester 3 requires students to develop a large piece of software to a customer’s requirements (B1-B6). In all other modules, coursework is used to develop these skills (B1-B6).

### Assessment Strategy
B1-B6 feature prominently in all modules. In particular a group project gives students experience of working within teams to engineer a complex piece of software (B1-B6). An individual project during Semester 3 requires students to develop a large piece of software to a customer’s requirements (B1-B6). In all other modules, coursework is used to develop these skills (B1-B6).

### Practical Skills
On completing the programme students should be able to:
- C1. Conduct investigations using the technical and professional literature
- C2. Use and evaluate appropriate tools and techniques
- C3. Undertake critical evaluation (both theoretical and empirical) of alternative solutions
- C4. Formulate problems and identify suitable approaches to solving them
- C5. Reason abstractly about the structure and behaviour of computer systems

### Teaching and Learning Methods
All modules involve coursework, much of which involves problem solving skills (C4). This is especially so in the group and individual projects where students need to select, evaluate and apply appropriate tools and techniques (C2). Here and elsewhere students will need to investigate possible alternatives in the technical and professional literature (C1, C3), and to reason about computer systems (C5).

### Assessment Strategy
Cognitive skills are assessed by a range of coursework (reports, design documents, etc.) (C1-C5).
### Transferable/Key Skills

On completing the programme students should be able to be proficient in:

- D1. Written communication
- D2. Problem solving
- D3. Interpersonal communication
- D4. Initiative
- D5. Oral presentation
- D6. Adaptability
- D7. Teamwork
- D8. Planning and organisation
- D9. Computer literacy

The above covers the generic knowledge and understanding, subject/specific/professional skills, cognitive skills and key (transferable) skills of a ‘typical’ Masters level graduate, although for each individual student there will be variations depending on the dissertation taken during Semester 3.

### Teaching and Learning Methods

Key skills feature throughout the programme; teamwork in the group project (D7); oral presentation, interpersonal communication, and planning and organisation in the Semester 3 Project module, as well as the group project (D3, D5, D8); written communication in all modules, but especially in the Semester 3 project (D1); problem solving, initiative and adaptability are necessarily covered throughout the programme (D2, D4, D6, D9).

The strategy of the degree programme is to give a broad coverage of the subject of Computing Science in Semesters 1 and 2, and then to provide specialisation in the project undertaken in Semester 3.

### Assessment Strategy

Key (transferable) skills are assessed by both written and oral presentations (D1–D9). Teamwork in the group project is assessed both by the module leader at team oral presentations and by a group monitor (a member of teaching staff) who attends group formal meetings (D5, D7).

### 12 Programme Curriculum, Structure and Features

**Basic structure & Key features of the programme (including what makes the programme distinctive)**

All modules are compulsory. The course has 180 credits. The taught part of the course takes place from September to June. There are six taught 20-credit modules split equally across semesters one and two. In June students begin work on the 60-credit individual project which is submitted at the end of August.

**Programme regulations (link to on-line version)**

### 13 Support for Student Learning

The Student Services portal provides links to key services and other information and is available at: [https://my.ncl.ac.uk/students/](https://my.ncl.ac.uk/students/)

**Induction**

During the first week of the first semester students attend an induction programme. New students will be given a general introduction to University life and the University’s principal support services and general information about the School and their programme, as described in the Degree Programme Handbook. New and continuing students will be given
detailed programme information and the timetable of lectures/practicals/labs/ tutorials/etc. The International Office offers an additional induction programme for overseas students.

**Study skills support**
Students will learn a range of Personal Transferable Skills, including Study Skills, as outlined in the Programme Specification. Some of this material, e.g. time management is covered in the appropriate Induction Programme. Students are explicitly tutored on their approach to both group and individual projects.

Numeracy support is available through Maths Aid and help with academic writing is available from the Writing Development Centre (further information is available from the Robinson Library).

**Academic and Pastoral support**
Each undergraduate and taught postgraduate student will be assigned a personal tutor.* A personal tutor is one part of a wider network of advice and guidance available to students to support their personal and general academic development. The module leader acts as the first point of contact for subject-specific academic advice. Thereafter the Degree Programme Director or Head of School may be consulted. Issues relating to the programme may be raised at the Student-Staff Committee, and/or at the Board of Studies. Within the academic unit, students may also receive additional academic and pastoral advice from a range of other student-facing staff including degree programme directors, dissertation/project supervisors, and administrative support staff.

*Arrangements may vary for students taking special types of provision.

The University also offers a wide range of institutional services and support upon which students can call, such as the Writing Development Centre, Careers Service and Student Wellbeing Service. This includes one-to-one counselling and guidance or group sessions / workshops on a range of topics, such as emotional issues e.g. stress and anxiety, student finance and budgeting, disability matters etc. There is specialist support available for students with dyslexia and mental health issues. Furthermore, the Student Union operates a Student Advice Centre, which can provide advocacy and support to students on a range of topics including housing, debt, legal issues etc.

**Support for students with disabilities**
The University’s Disability Support team provides help and advice for disabled students at the University - and those thinking of coming to Newcastle. It provides individuals with: advice about the University’s facilities, services and the accessibility of campus; details about the technical support available; guidance in study skills and advice on financial support arrangements; a resources room with equipment and software to assist students in their studies.

**Learning resources**
The University’s main learning resources are provided by the Robinson and Walton Libraries (for books, journals, online resources), and the University’s IT Service (NUIT), which supports campus-wide computing facilities.

All new students whose first language is not English are required to take an English Language Proficiency Test. This is administered by INTO Newcastle University Centre on behalf of Newcastle University. Where appropriate, in-sessional language training can be provided. The INTO Newcastle University Centre houses a range of resources which may be particularly appropriate for those interested in an Erasmus exchange.

Studies. Student opinion is sought at the Student-Staff Committee and/or the Board of Studies. The introduction of new modules and major changes to existing modules are subject to approval by the Faculty Learning Teaching and Student Experience Committee (FLTSEC).

Programme reviews
The Board of Studies conducts an Annual Monitoring and Review of the degree programme and reports to FLTSEC. The FLTSEC takes an overview of all programmes within the Faculty and reports any Faculty or institutional issues to the Taught Programmes Sub-Committee.

External Examiner reports
External Examiner reports are considered by the Board of Studies. External Examiner reports and the response to the External Examiner from the Board of Studies are shared with institutional student representatives, through the Staff Student Committee.

Student evaluations
All modules, and the degree programme, are subject to review through online questionnaires. Informal student evaluation is also obtained at the Staff-Student Committee, and the Board of Studies. The results from student surveys are considered as part of the Annual Monitoring and Review of the programme and any arising actions are captured at programme and School / institutional level and reported to the appropriate body.

Mechanisms for gaining student feedback
Feedback is channelled via the Staff-Student Committee and the Board of Studies.

Faculty and University Review Mechanisms
Every six years degree programmes in each subject area undergo Learning and Teaching Review. This involves both the detailed consideration of a range of documentation, and a review visit by a review team (normally one day in duration) which includes an external subject specialist and a student representative. Following the review a report is produced, which forms the basis for a decision by University Learning, Teaching and Student Experience Committee on whether the programmes reviewed should be re-approved for a further six year period.

Accreditation reports
This programme is not accredited by any professional body.

Additional mechanisms

15 Regulation of assessment

Pass mark
The pass mark is 50

Course requirements
Progression is subject to the University’s Postgraduate Taught Progress Regulations and Examination Conventions. There are reassessment opportunities, with certain restrictions. Additional programme-specific requirements can be found in the Programme Regulations.

The University employs a common marking scheme, which is specified in the Taught Postgraduate Examination Conventions, namely:

<table>
<thead>
<tr>
<th>Summary description applicable to postgraduate Masters programmes</th>
<th>Summary description applicable to postgraduate Certificate and Diploma programmes</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;50</td>
<td>&lt;50</td>
</tr>
<tr>
<td>Fail</td>
<td>Fail</td>
</tr>
<tr>
<td>50-59</td>
<td>50 or above</td>
</tr>
<tr>
<td>Pass</td>
<td>Pass</td>
</tr>
</tbody>
</table>
60-69  Pass with Merit
70 or above  Pass with Distinction

Role of the External Examiner
An External Examiner, a distinguished member of the subject community, is appointed by the University, following recommendation from the Board of Studies. The External Examiner is required to:

i. confirm whether the standards of the University’s awards meet or exceed the academic standards specified in external reference points such as the Framework for Higher Education Qualifications, the UK Quality Code, subject benchmark statements, and, where appropriate, the requirements of professional, statutory and regulatory bodies;
ii. confirm whether the academic standards of the University’s awards are consistent with those of similar programmes in other UK higher education institutions;
iii. report on whether the University’s processes for assessment measure student achievement rigorously and fairly and are conducted in line with University policies and regulations;
iv. identify, where appropriate, examples of exemplary practice and innovation in learning, teaching and assessment;
v. comment on opportunities to enhance the quality of the learning experience provided to students.

In addition, information relating to the programme is provided in:

The University Prospectus:  http://www.ncl.ac.uk/postgraduate/

Degree Programme and University Regulations:  http://www.ncl.ac.uk/regulations/docs

The Degree Programme Handbook

Please note. This specification provides a concise summary of the main features of the programme and of the learning outcomes that a typical student might reasonably be expected to achieve if she/he takes full advantage of the learning opportunities provided. The accuracy of the information contained is reviewed by the University and may be checked by the Quality Assurance Agency for Higher Education.
