

## **MSc Mechanical Engineering with English PROGRAMME SPECIFICATION**

<b>1.Awarding Institution:</b>	University of Newcastle upon Tyne
<b>2.Teaching Institution:</b>	University of Newcastle upon Tyne
<b>3.Programmes Accredited by:</b>	None
<b>4.Final Award:</b>	M.Sc.
<b>5.Programme Titles:</b>	M.Sc. in Mechanical Engineering with English
<b>6.UCAS codes:</b>	N/A
<b>7.QAA Benchmarking Group</b>	N/A
<b>8. Date of production / revision</b>	<b>November 2001, July 2004</b>

### **9 Programme Aims**

- To enable and assist suitably qualified overseas graduates from a range of engineering backgrounds to
  - develop and widen their knowledge base in mechanical engineering to Masters level standard,
  - develop generic problem solving skills applicable to current, mainstream mechanical engineering systems,
  - achieve more in-depth expertise in selected areas of mechanical engineering,
  - engage in the planning, execution and written/oral presentation of an extended, industrially research orientated project.
  - extend their English language skills and experience of life and study in an English HE institution.
- To produce Master level engineering graduates who are able to participate effectively in a wide variety of industrial and/or research environments in the field of mechanical engineering.
- To lead to a qualification conforming to the M-level (HE4) of the FHEQ.

## **10 Intended Learning Outcomes; Teaching and Learning Strategies and Methods; Assessment Strategies and Methods**

Graduates from this Masters programme should have an extended working knowledge and appreciation of mechanical engineering, with in-depth knowledge and skills in certain specific areas. Their skills in the application of a range of analytic and numeric tools and techniques to engineering systems should be well-developed beyond that expected at the undergraduate level, and they should have the ability and confidence to apply, and critically assess, results obtained from such methods. Graduates should be able to propose/formulate suitable strategies and practices to tackle typical, mechanical engineering orientated problems. Graduates will be able to express and discuss technical engineering ideas in the medium of the English language.

### ***A. Knowledge and Understanding***

A successful student will have gained and be able to demonstrate:

A1 An advanced knowledge of a broad range of modelling methodologies, and underlying mechanical science, commonly used in the development and analysis of mechanical engineering systems.

A2 Knowledge of fundamental design issues relevant to mechanical engineering, and an understanding of how to formulate and analyse design solutions in various engineering contexts.

A3 Working knowledge of a range of modern mathematical methods and tools used in the development and analysis of mechanical engineering systems.

A4 In-depth knowledge of one or more of the following (depending of selection of option modules and project area): specific engineering systems, design methods, modelling techniques, mathematical and/or numerical techniques.

A5 Knowledge of basic research and development principles and practices relevant to mainstream engineering industry.

A6 Knowledge of key professional, safety and ethical issues arising in modern engineering industry.

A7 Knowledge of time-management and work planning issues related to the organization, implementation and successful completion, including reporting, of an individual, Masters level, engineering based project.

A8 Knowledge of the English language and grammar relating to spoken, written and technical situations.

#### *Teaching Strategy/Methods*

The main mechanism for imparting the above knowledge and understanding in A1-A6 is lectures, combined with tutorials, examples classes, activities and coursework. Design labs and CAD sessions are used for A2, whilst computer labs form part of the teaching methods for some of the numerically orientated option modules (A4). In-depth knowledge outcomes in A4 are also achieved via project work, as is outcome A7. Outcome A6 is also supported by project based experience in many cases. Language knowledge (A8) is taught formally on modules run by the University Language Centre. These modules employ small group classes and language labs, making use of video and other techniques as appropriate.

#### *Learning Strategy/Methods*

Students are required to support and reinforce lecture based knowledge transfer through private study, making use of recommended texts and web-based material. Tutorials allow lecture material to be discussed and supplemented, and provide a mechanism for detailed feedback to the student on coursework. Supervised project work provides the student with the opportunity to develop knowledge and understanding in an area of interest to a greater depth, and further reinforces material from the taught component of the programme. The Language Centre provides a range of facilities, and encourages students to access these to support material taught in classes.

#### *Assessment Strategy/Methods*

Formative assessment of student progress on taught modules is affected through the use of tutorial exercises and coursework in the form of written answers to set exercises and/or case-study reports. The primary, summative means of assessing knowledge and understanding is the closed book examination. The balance between coursework assessment and examination varies as appropriate to each module. In-depth learning and understanding acquired during work of the main project is assessed by dissertation. Interview of candidates by the external examiner is also used, where appropriate, to assess student learning.

### ***B. Subject-specific/professional skills***

A successful student will be able to

B1 Identify, adapt and develop models appropriate to the study of a wide-range of different mechanical engineering type systems, processes and products.

B2 Apply standard scientific principles to develop engineering solutions to a range of practical problems.

B3 Select and apply appropriate mathematical and/or numerical methods for analysing relevant problems, and to critically assess and interpret results obtained from these methods.

B4 Propose, formulate and present suitable design strategies and practices to tackle typical mechanical engineering orientated problems.

B5 Undertake an independent literature review on a specialized engineering topic.

B6 Produce clear and detailed written report of engineering project work.

B7 Express and discuss technical engineering concepts in both spoken and written English.

### *Teaching strategy*

Skills B1-B4 are introduced, illustrated and explained in lectures and examples classes. Subsequent work in tutorials and labs reinforces these skills. More in-depth exposure to skills B1-B4 is provided during work on the main project, which is also central to the strategy for teaching B5-B6. Key transferable skills underpinning B5-B6 are introduced in the taught component of the programme, serving as preparation for project work. B7 is supported by Language Centre modules, and is realized as an integral component in the teaching on all components of the programme.

### *Learning Strategy*

Skills B1-B4, B7 are developed through work on exercises provided in lectures, example classes, tutorials and labs. Regular student attendance and participation at all formal classes is expected and required. Acquisition of B1-B4 is also through application and extension of taught material to project work, which provides the main mechanism for developing skills B5-B7.

### *Assessment Strategy*

Satisfactory acquisition of skills B1-B4, and the written component of B7, is formally assessed through coursework (written solutions to set problems, lab reports and mini-projects) and written examination. In-course assessed work provides an important mechanism for monitoring student development through the course. Written examinations test skill acquisition and the ability to apply such skills under time constraints. B5-B6 are assessed by project dissertation, whilst ability to express ideas in spoken English is assessed on Language Centre modules and through work on the project.

### *C Cognitive skills*

The programme provides students with opportunities to develop and demonstrate skills in

C1 The interpretation and critical assessment of existing theories, models, methods and results, both qualitative and quantitative, within a broad engineering and physical science framework.

C2 The recognition and appreciation of problems inherent in a given engineering system or approach, and the ability to synthesis, and propose evaluation methods for, alternative solution strategies.

C3 The construction of rational argument and the logical presentation of results, using the medium of the English language.

### *Teaching strategy*

The inculcation of cognitive skills C1-C3 takes place throughout the entire degree programme, and draws on teaching, learning and assessment strategies (as employed in lectures, tutorials, labs and project work) described in A and B above. Project work provides an important mechanism not only for consolidating the technical information and learning outcomes introduced and developed in the taught modules, but also for developing more generic, cognitive skills by drawing on the body of these experiences and learning outcomes. Supervision of project work is structured to assist students develop their learning skills.

### *Learning Strategy*

Students are encouraged to adopt a critical and logical approach when interpreting the methods and ideas presented and discussed in the programme. Emphasis is given to the requirement of submitting work that exhibits clear and logical presentation, with rational explanations of methods employed. In this respect the planning, execution and reporting of work undertaken during the project plays an important role in the development of cognitive skills.

### *Assessment Strategy*

Primary assessment of cognitive skills is via evaluation of student performance on submitted coursework (problem-solving exercises, mini-project and lab reports) and the final project,

the later being assessed through the written dissertation together with formal feedback from the project supervisor. Written examinations for the taught modules also provide a mechanism for assessing the development of cognitive skills.

### ***D Key (Transferable) Skills***

The successful student will be able to:

D1 Communicate ideas clearly, by means of both written documentation and oral presentation, using the medium of the English language.

D2 Effectively utilize modern information resources and technologies.

D3 Prioritize, organize and schedule work activities effectively.

D4 Work independently or in a team environment.

D5 Demonstrate generic problem solving skills.

### *Teaching strategy*

Proficiency in key skills D1-D5 is addressed directly by taught material forming part of the module *Methods In Industrial Research and Development*, which is aimed at teaching generic skills and methods commonly used in industrial R&D. This material covers presentation and writing skills (D1), use of library and other information resources (D2), and work management (D3). Further, students will undertake both individual and group problem-solving activities within this module to assist in developing key skill D4. Students who are not native speakers of English usually receive additional instruction related to D1 by registering for the Language Centre module *Writing Dissertations in Science & Engineering*. In addition to the key-skill-specific taught material, students will develop these skills through participation in other aspects of the programme. In particular project based work is central in the teaching strategy for D1-D3.

### *Learning Strategy*

Key skills D1-D5 are formally taught, and feedback on student performance assists the learning process. These skills are also required in other, subject specific modules, and active participation in these modules will further aid key skill development. Successful completion of the final project will require that a student is developing and applying these skills.

### *Assessment Strategy*

Key-skill development is formally assessed in the module *Methods In Industrial Research and Development*. Assessment is through performance demonstrated by written work and by oral presentations. The key skills are also indirectly assessed through performance on coursework for other modules and on the final project.

## **11 Programme Features, Structure and Curriculum**

### ***A. Programme Features***

This is a one year, full-time programme, starting in September, leading to the award of an MSc in Mechanical Engineering. The programme consists of a taught component, which covers a range of mechanical engineering topics and language instruction, together with a major, project-based piece of work. The project work component, which represents one-third of the programme and is assessed by dissertation, usually involves laboratory based work and/or modelling and numerical studies. There is considerable scope for industrial involvement in projects.

### ***B. Programme Structure***

The taught component of the programme consists of a total of 120 credits which are studied during Semesters 1 and 2 (September-May), with 10 credits requiring a total of 100 hours of study-time. Students begin preliminary work on their individual, 60 credit project early in the first Semester. Work on the project continues throughout the year, and a project dissertation must be submitted for assessment in mid August.

### ***C. Programme Curriculum***

#### **Compulsory Modules**

Candidates shall take the following compulsory modules unless they have been studied for a previous degree programme, in which case the Degree Programme Director shall substitute appropriate modules:

<b>Module Code</b>	<b>Credit Value</b>	<b>Descriptive Title</b>
MMM899	60	Masters Project Mechanical & Systems Engineering
MMM839	10	Methods in Industrial Research and Development
CPE401	15	Joining Technology
ENM417	10	Continuum Mechanics
MMM401	15	Bioengineering
MMM404	15	Design of Mechanical Power Transmissions
MMM403	15	Thermal Power & Propulsive Systems
MMM331	10	Dynamics and Control

As non-native speakers of English, candidates on the MSc Mechanical Engineering with English programme (unless exempted by the Degree Programme Director) shall normally be required to take the module:

<b>Module Code</b>	<b>Credit Value</b>	<b>Descriptive Title</b>
LCE814	10	Writing Dissertations in Science & Engineering

### **Optional Modules**

Candidates for the MSc in Mechanical Engineering with English, subject to the approval of the Degree Programme Director and the Director of the Language Centre, will normally be directed towards 20 credits of English language modules selected from:

<b>Module Code</b>	<b>Credit Value</b>	<b>Descriptive Title</b>
LCE102	10	Reading and Writing, Part A
LCE103	10	Reading and Writing, Part B
LCE104	10	Reading and Writing, Level 2, Part A
LCE105	10	Reading and Writing, Level 2, Part B
LCE106	10	Listening and Speaking, Part A
LCE107	10	Listening and Speaking, Part B
LCE108	10	Listening and Speaking, Level 2, Part A
LCE109	10	Listening and Speaking, Level 2, Part B
ISK301*	10	Integrated Skills, Level 3, Part A
ISK302/303*	10	Integrated Skills, Level 3, Part B

\*these modules may be substituted for LCE modules only where candidates can demonstrate their ability in English to the satisfaction of the Director of the Language Centre.

Candidates will not normally be required to select further optional modules, however if they have been exempt from particular language modules they would select optional modules from list below to make their programme up to 180 credits.

	<b>Module Code</b>	<b>Credit Value</b>	<b>Descriptive Title</b>
	MMM836	15	Computational Fluid Dynamics
Either Or	CSC601	10	Introduction To Programming in C++
	CSC603	10	Hardware/Software Interface
	ENM313	5	Numerical methods with Applications
	ENM316	5	The Finite Element Method
	ENM319	5	Optimization
	MMM400	15	Automatic Control
	MMM808	15	Robotics
	ENM832	10	Partial Differential Equations I
	CIV411	10	Environmental Modelling

CIV822	10	Soil Modelling & Numerical Methods
CPE303	10	Reliability & Lifetime Prediction
CPE400	15	Advanced Materials & Processes
MAS358	10	Financial Modelling (not available 2004-05)
MAS413	15	Real Fluids
MAS462	15	Stochastic Processes
MAS4xx	15	Stochastic Calculus & Finance
MAR829	20	Fluid Structure Interaction
MAR839	10	Advanced Hydrodynamics

In appropriate circumstances, the Degree Programme Director may substitute up to 20 credits of alternative relevant modules to those listed above.

*See appendix I table showing relation of curriculum components to learning outcomes ABCD.*

## **12 Criteria for Admission**

Applicants for this MSc should have a good Honours level first degree in a relevant engineering discipline.

Applicants who hold non-standard qualifications, and/or have relevant experience will be considered on an individual basis.

In addition, applicants who are non-native speakers of English are required to provide evidence of English language proficiency equivalent to IELTS of 5.5 or better.

## **13 Support for students and their learning**

- The first, induction, week of the programme offers a series of introductory lectures, meetings and visits designed to support new students. These activities include meetings with the Degree Programme Director and other School staff to discuss the programme; a guided tour of the main University (Robinson) library; and a variety of social activities arranged by the Student Union, including specific events for overseas students. Details and schedules of induction week activities are sent to students in August, prior to the start of the programme.
- Students are allocated a personal tutor whose role is to assist students on both academic and non-academic issues.
- Facilities available to students to support their learning include a range of computing services, offering technical software, email and internet access; use of the Robinson library, and electronic information resources; and the University Language Centre.
- Other University provided services supporting student welfare include the Accommodation Office; careers and counselling services; Student Progress Office;

International Office; Chaplaincy; Centre for Physical Recreation and Sport. In addition, on arrival in Newcastle students are encouraged to register with the local Saville Medical Practice.

- The School provides each student with a Degree Programme Handbook, which contains essential information concerning the operation and content of the programme, together with further details of support facilities provided by the School and University, and expectations of conduct placed on students.

Services and facilities available to students include the following:

- Personal Tutor;
- Degree Programme Director;
- Stage Manager;
- Student/staff ratio of 15:1
- Induction activities for each Stage;
- Study skills instruction in Stage 1 and University Web based materials;
- Library visits and instruction;
- Degree Programme Handbook (including Degree Regulations and Module sheets);
- School Student Handbook (Web based);
- University Computing Service facilities (including extensive PC and UNIX provision, software applications, e-mail and internet access);
- University (Robinson) Library, including search facilities and inter-library loans;
- School Office;
- Extensive laboratories;
- University Housing Office (which makes an offer of University accommodation to each first year student);
- University Careers Service;
- University Counselling Service;
- University Language Centre;
- Students' Union services, including societies, refectories and Student Advice Centre;
- Centre for Physical Recreation and Sport;
- Student Progress Office;
- International Office;
- University Chaplaincy;
- Saville Medical Practice.

## **14 Methods for evaluating and improving the Quality and standard of teaching and learning.**

### **Mechanisms for review:**

- Internal review
- Annual Monitoring/Review of Taught Programmes
- Module Review (including University Questionnaire Service returns)
- Annual Review/Revision of Regulations
- HEFCE/QAA Reports
- External Examiners' Reports to VC  
(Ref: FTC Minutes annually)

### **Committees with responsibilities for quality and standards**

- University Teaching and Learning Committee
- Faculty Teaching and Learning Committee
- Faculty Management Board (for resource issues)
- Board of Studies
- School Teaching and Learning Committee
- School Staff/Student Committee
- Board of Examiners (Ref: Exam. Board Minutes file, School Office)

### **Mechanisms for student feedback**

- University Questionnaire Service returns
- Module Questionnaires
- School Staff/Student Committee
- Student representation on Board of Studies
- University Staff/Student Committee
- Student representation on University Teaching and Learning Committee
- Personal Tutors

### **Staff Development activities**

- All new staff complete Certificate in Learning & Teaching
- Seminars arranged by the Centre for Academic Development
- PDR
- Annual Monitoring Report prepared by Board of Studies
- Diploma in Teaching for all new staff

## **15 Regulation of Assessment**

### **Assessment rules**

- The Assessment rules are given in the "Taught Postgraduate Masters' Degree Entrance and Progress Regulations".
- The minimum pass mark is normally 50%.
- There is limited condonation for marks of 40-50% where the overall average mark is more than 50% and no module mark is less than 40 %

### **Role of the External Examiner**

The External Examiners are involved in assessment of the course. Duties will normally include:

- Approval of Examination Papers
- Vetting in-course assessments and examination scripts
- Interviewing candidates prior to the Final Examination Board
- Attending the Final Board and participating in its deliberations
- Reviewing any subsequent special cases, either by correspondence or in special circumstances by subsequent visits to Newcastle.
- Returning a confidential report to the VC.

(Ref: University Regulations, PG Examination Conventions Handbook for External Examiners of Undergraduate Examinations)

### **16 Indicators of Quality and Standards**

- Annual External Examiners' Reports (School and FTLC reviews)
- Accreditation Reports
- Annual review of student destinations
- Annual Monitoring and Review of Taught Programmes by Board of Studies and reported to FTLC
- Internal Review
- Staff / Student Committee Minutes reviewed by Board of Studies
- Annual FTC review of Faculty Stage 1 progression (by School)
- Annual BoS review of student feedback questionnaires

### **17 Other Sources of Information**

This specification provides a concise summary of the main features of the programme and of the learning outcomes that a typical student might reasonably be expected to achieve if she/he takes full advantage of the learning opportunities provided. The accuracy of the information contained is reviewed by the University and may be checked by the Quality Assurance Agency for Higher Education.

In addition, information relating to the course is provided in:

The University Prospectus

The School Website

The University and Degree Programme Regulations

The Masters Degree Programme Handbook
