

Founderships 2017-18

Danwen Huang
BSc Hons Computer
Science (2017)

Monster Hut is an indie games development studio that plans to merge storytelling with Artificial Intelligence in an interactive environment. We would like to utilise the power of AI programming to create stories where characters grow and behave according to player actions and allow each player to share different stories with others that played the same game. Our first game concept, set in a family home where the player gets to learn as well as affect family relations (for better or worse), is just one example of how a combination of AI and interactive storytelling can be merged.

Andrew Warburton
BSc Hons Computer
Science (2017)

visavis is an online dating app that leverages technology to assist people in establishing real life dates in a safe location. It operates as a multi-sided platform bringing together users and venues. The message functionality has been replaced by a date setup service that enables users to invite other users to meet by selecting a (partner) venue and specifying the date & time. Upon acceptance both users automatically pay a deposit (to be deducted from the venue bill). This financial commitment minimises the likelihood of getting stood up.

Michalis Panayiotou
BSc Marketing &
Management (2017)

Ligabis is the world's first crypto-estate that combines estate planning, artificial intelligence and blockchain technology. Ligabis allows users to plan, manage and settle their estate without the need for legal middlemen and without the expensive legal costs. The legal costs of dying is no longer expensive.

Regulation and
Sustainable Development
(2016)

LOOP is a circular economy platform for the built environment. We index and leverage data through our innovative material passports, place these on our platform and facilitate reuse and sharing between organisations.

Terry Clarke
MSc Renewable Energy,
Enterprise &
Management (2015).

Neuforic is an organic energy tea whose unique composition of natural ingredients works directly on the brain by enhancing the level of certain neurotransmitters that increase mental focus, provide energy and reduce fatigue without negative side effects. To ensure maximum impact Neuforic uses two bio enhancers, which support the uptake of vitamins and minerals.

Maren Klein
MSc E-Business (2017)

Nebula Labs is a software house focused around the processes and methodologies used in the technical development of successful start-up products, to cater for new start-ups, who themselves want an MVP product built as a proof of concept but lack a technically skilled team and require technology incubation, and for established SMEs who are undergoing Digital Transformation and want to adopt the start-up-thinking agile approach as we move into the Industry 4.0 era.
