Learning and Teaching Centre

Science Central

Brief

The proposed new Learning and Teaching Centre will be a flagship development for Newcastle University and will be its third building on Science Central. The building will be circa 7000m², costing £34m.

The expectation is that the project will be delivered within budget and on programme, balancing initial build cost against whole life occupancy costs.

Vision

Our vision is for an inspiring building with cutting-edge learning, teaching and conference facilities. The key objective of this project is to contribute towards the University's growth agenda by establishing a dedicated learning centre at Science Central providing teaching and study space, conference facilities and some academic office accommodation. It will also create a high quality venue to be used for events and conferences.

Further Information

It is currently envisaged that the building will be ready for occupation by Autumn 2019 (subject to detailed review).

Status: Concept Design
Project Value: £34,000,000
