Mountains and Megastructures

Neo-Geologic Landscapes of Human Endeavour

- Undertakes an examination of mountains and megastructures as interrelated phenomena, drawing on the multidisciplinary nature of architectural research
- Examines mountains and megastructures in an interchangeable way, uniquely negotiating the fixed boundaries of natural and artificial worlds to suggest a more complicated relationship between landscape and architecture
- Includes historical, speculative, literary, performative, geographic, visual, social and participatory investigations to contribute to the wider academic discourse on cultural and political landscapes, demonstrating the potential of architectural research in its broadest sense

This book explores the shared qualities of mountains as naturally-formed landscapes, and of megastructures as manmade landscapes, seeking to unravel how each can be understood as an open system of complex network relationships (human, natural and artificial). By looking at mountains and megastructures in an interchangeable way, the book negotiates the fixed boundaries of natural and artificial worlds, to suggest a more complex relationship between landscape and architecture. It suggests an ecological understanding of the interconnectedness of architecture and landscape, and an entangled network of relations. Urban, colonialist, fictional, rural and historical landscapes are interwoven into this fabric that also involves discontinuities, tensions and conflicts as parts of a system that is never linear, but rather fluid and organic as driven by human endeavor .
