

**PROGRAMME SPECIFICATION**

**Note: within this document information relating exclusively to Biotechnology with Industrial Placement Year is shown in *italics***

<b>1</b>	<b>Awarding Institution</b>	Newcastle University
<b>2</b>	<b>Teaching Institution</b>	Newcastle University
<b>3</b>	<b>Final Award</b>	BSc Honours
<b>4</b>	<b>Programme Title</b>	Biotechnology/Biotechnology with Industrial Placement Year
<b>5</b>	<b>UCAS/Programme Code</b>	J700/J701
<b>6</b>	<b>Programme Accreditation</b>	None
<b>7</b>	<b>QAA Subject Benchmark(s)</b>	Biosciences
<b>8</b>	<b>FHEQ Level</b>	6
<b>9</b>	<b>Date written/revised</b>	July 2013

**10 Programme Aims**

**The academic aims of the programme are as follows:**

- To produce graduates who have a core knowledge and understanding in the subject areas of Physiology, Biochemistry, Molecular Genetics, Immunology, Microbiology and Pharmacology.
- To produce graduates who have a sound knowledge and understanding of Biotechnology.
- To develop student's intellectual and general transferable (key) skills including the ability to communicate effectively, to use IT and library resources appropriately, to prioritise work and to meet deadlines, to work alone and with others, to use initiative and solve problems, to use critical and analytical skills to analyse problems, propose solutions and critically to assess alternatives.
- To produce graduates who have well developed practical skills in relation to the biosciences, have an awareness of good practice in laboratory work and health and safety, and are able to apply quantitative and qualitative analysis to biological investigations and presentational skills including data analysis and statistics.
- To produce Honours graduates who are capable of carrying out research.
- To provide a flexible programme which leads to a qualification which meets the criteria for an Honours degree laid down in the QAA's National Qualifications Framework and which fully meets the Quality Assurance Agency Benchmarking Statement in Biosciences.
- To produce graduates capable of working in a wide variety of careers, including careers in biomedical and related sciences in research, development and education, careers in which there is greater emphasis on non-subject specific skills, and for more advanced study.
- *In the case of the Biotechnology with industrial placement year, to produce graduates who have acquired experience of working in an industrial context.*

**Aims in relation to the needs of stakeholders:**

The programme aims to ensure that our graduates are equipped with up to date knowledge and skills in relation to their degree subjects, in line with the needs of employers of bioscientists. The emphasis on development of intellectual and transferable skills ensures that our graduates are also well equipped for the broader non-specialist graduate job market. The inclusion of vocationally-related components and emphasis on career development throughout the programme also ensures the employability of our students.

## 11 Learning Outcomes

The programme provides opportunities for students to develop and demonstrate knowledge and understanding, qualities, skills and other attributes in the following areas. The programme outcomes have references to the benchmark statements for Bioscience.

### Knowledge and Understanding

On completing the programme graduates will have:

A1 Gained a core knowledge and understanding of their subject specialism and a variety of related disciplines.

A2 Gained knowledge of the scope of the subject specialism.

A3 Gained an in-depth knowledge of selected areas of their disciplines up to the current research level and developed an understanding of the experimental basis of this knowledge.

*A4 Developed an awareness of the context of the biotechnology industry including strategic imperatives and constraints.*

*A5 Applied their knowledge of Biotechnology in an industrial context.*

### Teaching and Learning Methods

The teaching and learning strategy is designed to encourage a progressive acquisition of knowledge and understanding. The first three semesters of the programme are concerned with providing core knowledge and understanding of the subject specialism. The second half of the programme aims to develop students' knowledge of the breadth and scope of their subject specialism and an in depth knowledge of selected areas of their disciplines and of the experimental basis of this knowledge up to the current research level (A2, A3). There is a gradual change of emphasis over the three years from strongly supported teaching, such as lectures which provide the core themes, the scope of the knowledge and understanding required, and explanation of concepts to a greater use of study groups and more independent self-directed learning from the scientific literature. Knowledge and understanding are further promoted by seminars, tutorials and coursework (A1, A2, A3), which allow students to explore material in more depth and to exchange ideas with staff and fellow students. Practical classes reinforce the taught curriculum (A1, A2). A3 is promoted through individual student projects and in-depth analysis of current research literature. *A4 and A5 are acquired through a one-year industrial placement.*

### Assessment Strategy

Knowledge and understanding are primarily assessed via unseen written examinations. Understanding and the ability to apply knowledge are further assessed by coursework. The weighting of examination and coursework varies as appropriate to the module and most modules include some aspect of formative assessment (including the use of Blackboard and interactive computer packages).

The format of the unseen examination also varies as appropriate to the module and the level of study but can include, Extended Matching Item (EMI) and multiple choice questions (MCQ), essays, problem solving, literature and data analysis.

The coursework element can include, practical write ups/laboratory reports, study group tasks, oral presentations, posters, in course tests (normally EMI or MCQ), extended essays, timed essays.

Peer review is sometimes employed in the assessment of study group tasks and presentations.

*A4 and A5 are assessed by means of a report on the industrial placement year.*

Practical Skills
<p>On completing the programme graduates will have:</p> <p>B1 Mastered essentials of basic laboratory skills, safe working practices and the ability to carry out experiments accurately and responsibly.</p> <p>B2 The ability to obtain, record, collate, analyse and interpret data from experiments.</p> <p>B3 The ability to summarise and present such data according to scientific conventions.</p> <p>B4 Developed the ability to use primary literature and bibliographic databases.</p> <p>B5 Developed the ability to evaluate critically scientific information.</p> <p>B6 Developed the ability to undertake in-depth research in relation their subject specialism.</p> <p><i>B7 Further practiced and enhanced some or all of the above skills by working in an industrial setting</i></p>
Teaching and Learning Methods
<p>The core experimental skills of laboratory work and data handling (B1, B2 and B3) are progressively developed throughout the programme through a series of practical classes. Students are introduced at Stage 1 to a Laboratory Code of Practice, where safety and responsibility in the laboratory are outlined. Students who so wish are provided with an opportunity to develop these skills further and design and execute their own experiments through an individual laboratory research project in final year. Students are provided in their second year with training in the use of bibliographic databases including PubMed and Medline. Laboratory practical classes and seminars throughout the programme encourage students to evaluate critically scientific information in a range of forms (data from their own experiments, published papers and problem-solving tasks). The ability to undertake research in relation to the subject specialism is developed progressively from group-based tasks early in the programme to individual in depth research projects in the final year. <i>B7 is acquired through a one-year industrial placement.</i></p> <p>Attendance at laboratory practical classes is compulsory and feedback on laboratory work and practical reports reinforces students' acquisition of basic experimental skills (B1, B2 and B3). All submitted practical work must be presented according to scientific conventions. Practical classes are supported by postgraduate demonstrators who undergo compulsory training. Feedback on assessed course work requiring the student to search bibliographic databases reinforces this skill (B4). Study Group tasks and seminars are used to encourage students to develop the confidence to evaluate critically scientific information and students are provided with feedback on these activities (B5). Feedback on study group-based and individual assignments enables students to improve their research skills and this is further reinforced at an advanced level by one-to-one supervision of research projects by academic staff who are experienced researchers. <i>Learning in the industrial placement is supported by the placement supervisor and visiting tutor.</i></p>
Assessment Strategy
<p>Practical reports require students to demonstrate the skills associated with experimental work (B1-3), and these are further assessed at advanced level by the project supervisor's assessment of the student's competence, and the project report and oral presentation. Written assignments throughout the course will assess students' ability to undertake research and to use bibliographic databases (B4, B6) and this is further assessed in the project report. The ability to evaluate critically scientific information (B5) is assessed by various written assignments and seminar presentations, by the project report and by unseen examination. At stage 3 students are required to complete a research project. The project is assessed via a written dissertation, oral presentation and a supervisor's assessment of the competence and professionalism shown in the conduct of the project.</p> <p>The ability to undertake in depth research (B6) is primarily assessed by the project supervisor's assessment of competence and professionalism and the written report and oral presentation on the project. <i>B7 is assessed by means of a report on the industrial placement year.</i></p>

### Intellectual Skills

On completing the programme graduates will have:

C1 An ability to read and use scientific literature with a full and critical understanding, addressing content, context, aims, objectives quality of information and its interpretation and application.

C2 An ability to critically evaluate information and data from a variety of sources, to interpret quantitatively and qualitatively scientific information, and to explain complex scientific ideas in written, visual and oral form.

C3 An ability to assess the value and limitations of existing knowledge and experimental techniques.

C4 An ability to use and integrate several lines of evidence to formulate key hypotheses, to test hypotheses using logical and consistent quantitative and qualitative arguments, and to identify key data in these processes.

C5 Developed skills of independent learning.

*C6 An ability to solve problems in the context of an industrial environment.*

### Teaching and Learning Methods

Intellectual skills (C1-5) are progressively developed throughout the programme by practical work, study group tasks, seminar work and the research project. *C6 is developed through the industrial placement year.*

At all stages students are encouraged to consider critically and evaluate information and experimental data from a wide variety of sources, including textbooks, the internet, and primary sources of scientific literature (C1-C5). In Stage 3 students undertake a research project which requires them to analyse experimental data or alternative forms of information, and one-to-one supervision and feedback supports learning throughout the project. In seminar discussions students are supported in critically interpreting and discussing some of the latest scientific developments in relation to their subject with experts in the various fields of research (C1-C5). *C6 is supported by the placement supervisor and visiting tutor.*

### Assessment Strategy

Cognitive skills are assessed via a range of coursework assignments including written exercises, seminar presentations and study group tasks. Unseen examinations further test the students' cognitive skills. The research project has an important role in assessing all of the cognitive skills, including the ability to use scientific literature in a critical manner (C1), the ability to evaluate, interpret and explain complex information from a range of sources (C2), assessing the limitations of existing knowledge (C3), integrating several lines of evidence and testing hypotheses (C4) and the skills of independent learning (C5). *C6 is assessed by means of a report on the industrial placement year.*

### Transferable/Key Skills

On completing the programme graduates will have:

D1 Study skills of reading, noting, recall and essay/report writing.

D2 Gained competence in the use of IT skills including e-mail, word processing, spreadsheets, presentation software, use of the Internet and on-line library facilities.

D3 Developed the ability to work independently.

D4 Developed interpersonal skills, including team-working.

D5 Developed the ability to plan, organise and prioritise work activities.

D6 Developed skills of written, oral and visual presentation.

D7 Developed the ability to develop and work towards targets for personal, academic and career development.

*D8 Further enhanced and practiced skills including team-working and the ability to plan, organise and prioritise work activities*

### Teaching and Learning Methods

Skills of reading, noting, recall and essay/report writing (D1) are developed through study skills support sessions, and tasks included directed reading and essays on which formative assessment is provided. Skills in the use of IT (D2) are developed through classes at various stages throughout the course and practised in a wide range of coursework. Skills of independent working (D3) are progressively developed by assignments throughout the programme. Students are initially encouraged to learn through group-based tasks and then through individual assignments culminating in the research project. Planning, organising and prioritising (D5) are developed through study skills support sessions and the project. The skills of written, oral and visual communication are developed in seminars and in the research project (D6). Interpersonal skills (D4) are developed through study group work, team-working exercises, seminars and the research project. The ability to develop and work towards targets for personal, academic and career development is developed through a programme of Career Management sessions. *D8 is achieved through the industrial placement year.*

Students are encouraged to explore with their personal tutor the development of their study skills (D1) and, where appropriate, additional counselling with the Faculty Study Skills Adviser is arranged. Students are provided with feedback on tasks requiring the use of IT skills (D2). Students are encouraged to reflect on their team-working skills and feedback on these are provided by peer-assessment of group tasks. Skills of planning, organising and prioritising are developed by a progressively more complex series of assignments, culminating in the research project. Students are encouraged to reflect on these skills and individual support is available from personal tutors and the research project supervisor. Students are enabled to monitor the development of their written, oral and visual presentational skills by feedback from peer and teachers on various assignments. Students are encouraged to discuss their personal goals with their tutors. All students are required to prepare and obtain feedback on a curriculum vitae in their second year. Students are encouraged to undertake appropriate work placements to explore further their career goals. *Students are encouraged to reflect on (and discuss with the supervisor and visiting tutor) their industrial placement year with respect to the skills they have developed and the implications for their career-planning and personal development.*

### Assessment Strategy

D1 to D7 are all assessed via coursework e.g. study group tasks, posters, oral presentations, and essays. An assessment schedule including deadlines is set for all modules and students are penalised for late submission of work (D5). The project has a key role in assessment of all of these skills including report-writing (D1), oral presentation (D5) and IT skills including advanced word processing and the use of PowerPoint (D2). The project supervisor is asked to assess students' inter-personal skills (D4) and skills of planning and organisation (D5). *D8 is assessed by means of a report on the industrial placement year.*

## 12 Programme Curriculum, Structure and Features

### Basic structure of the programme

Duration of course: 3 years full time based on 30 weeks attendance per annum.  
*4 years full time for programme with industrial placement: third year to be spent in a Biotechnology company*

Number of stages: 3

Total credits: 360 (*480 for programme with placement year*)

Module credits: range from 10 to 40; each 10 credits represents 100 hours of study.

Requirements for progression: passing all compulsory modules and gaining appropriate overall number of credits.

**Stage 1** provides a multi-disciplinary foundation covering a range of related biosciences, including Biochemistry, Cell Biology, Genetics, Immunology, Microbiology, Physiology, and Pharmacology. Students gain an appreciation of each of these specialisms and at the end of Stage 1 students may opt to transfer to another Bioscience programme if they so wish. At Stage 1 students are also introduced to laboratory skills and information and communications technologies.

**Stage 2** semester 1 builds on Stage 1 and provides students with a deeper knowledge of Molecular Medicine and Cell and Molecular Biosciences. The course focuses on the technologies that underpin our current understanding in these areas, and provides students with hands-on experience of a range of modern molecular techniques. The course also explores how bioinformatics helps make sense of the ever-increasing amount of biological data. Cell Biology is studied in greater depth, particularly in relation to membrane transport and signalling and the cell and molecular biology of the immune system. Emphasis throughout is on how knowledge of these areas can help in the understanding of human biology and disease.

**Stage 2** semester 2 provides greater specialisation in subjects relating to biotechnology. Topics include enzyme catalytic mechanisms, DNA replication, repair and recombination, proteins, protein trafficking and biological membranes. At Stage 2 students are introduced to research skills, and other important skills including data handling, presentation skills and team-working.

*Students on the 4 year programme undertake an industrial placement year following Stage 2, providing experience of working in a Biotechnology company and affording the opportunity to acquire additional knowledge and skills in the workplace.*

At **Stage 3** students further develop their research skills as they undertake a research project linked to a research group. They also study advanced topics on protein/DNA interactions, plant and animal biotechnology, structural and molecular biology in biotechnology and medical biotechnology. Additionally they study a module on business for bioscientists. They also further develop their skills of experimental design and critical analysis of scientific data, as well as presentation and IT skills.

### **Links between learning outcomes, curriculum and structure of the programme**

The modules that comprise these degree programmes are shown in the annex. Further detail can be seen in the module outline forms, which also show how the modules contribute to development of skills throughout the programme. Superimposed on the modules, there is a key skills strand running throughout the three Stages of the programme that introduces students to library skills, CIT, communication and presentation skills and careers management.

The curriculum is designed to allow systematic progression of students towards the programme's learning outcomes. Knowledge and understanding is progressively developed as students move from a broad overview of their subjects at Stage 1 to a much more specialised and detailed understanding at Stages 2 and 3. Practical techniques are also progressively developed through the course as students progress from competence in basic laboratory skills to the use of sophisticated laboratory techniques. Cognitive and intellectual skills also develop from simple problem-solving exercises at Stage 1 to more complex data handling and experimental design and data analysis at Stages 2 and 3, culminating in the research project that requires students to develop a highly critical approach to the scientific literature and to their own experimental data. Key skills are also progressively developed, being first introduced to the students (e.g. in a formal lecture or workshop session) and then practised and assessed in subsequent modules.

Thus, Stage 1 provides a firm grounding in the basic sciences underpinning the disciplines. By the end of this Stage the students will have:

- gained basic knowledge and understanding of subjects relating to biotechnology (A1)
- been introduced to basic laboratory skills, safe working practices and recording and interpretation of experimental results (B1-3)
- developed skills of independent learning (C5)
- developed study skills of reading, noting and recall (D1)
- been introduced to e-mail, word processing, library facilities and use of the Internet (D2)
- have developed the ability to work independently

At Stage 2 the course gives a broad overview of subject material considered essential to the subject of Biotechnology and starts to introduce the research basis of the acquired knowledge. By the end of this Stage students will have:

- developed further, at the level presented in undergraduate text books, knowledge and understanding of the major areas that are the 'core' of their disciplines (A2)
- experienced use of primary literature (B4)
- mastered essential elements of relevant laboratory techniques and safe laboratory practice and developed the ability to write laboratory reports (B1-3)
- started to develop the ability to evaluate critically scientific information (B5) and to appreciate the relationship between research and knowledge gain in the discipline (B6)
- continued the development of transferable (key) skills, including the ability to use computers for information retrieval and data handling (D2, B4)
- been introduced to skills of scientific essay writing (D1) and oral and visual communication (D6)
- improved cognitive skills of reasoning, analysis of scientific literature, critical evaluation and the ability to apply their knowledge in problem-solving (C1-4)
- developed further skills of independent learning (C5)
- developed inter-personal and team-working skills through collaborative work (D4)

At Stage 3 a higher level of specialisation is achieved. By the end of this Stage the students will have:

- extended their knowledge and understanding of the curriculum up to the current research level and developed an understanding of the experimental basis of this knowledge (A3)
- be fully competent in the use of primary literature and bibliographic databases, and have an improved ability to evaluate critically scientific information (B4-5)
- the ability to make oral and visual presentation of scientific data and knowledge (D3)
- developed skills of critical evaluation of scientific information (B3) and have acquired research and analysis skills (B6)
- produced project work that demonstrates a range of skills including subject-specific skills (B1-B6), report-writing (D1), IT skills (D2), independent working (D3), inter-personal skills (D4), planning, organising and prioritising (D5), presentation skills (D6), in-depth knowledge of selected areas (A3), and cognitive skills (C1-4)
- had further opportunities to practise a variety of transferable (key) skills that will be valuable for a range of employment opportunities.

<b>Key features of the programme (including what makes the programme distinctive)</b>
---

A major strength of the programme is the close linkage between teaching and research. The majority of teaching staff are also research active and teach in areas relating to their particular expertise. This ensures that the curriculum content is kept up-to-date and the links between scholarship and research are explicit. Furthermore, the continued participation of teaching staff in professional development programmes ensures that delivery of teaching is informed by up-to-date practice. The strong research base in the Faculty ensures that the most modern equipment is available to undergraduate students for their practical work. Involvement of teaching staff for the programme on committees of national professional bodies helps to ensure that the programme continues to be informed by external developments.

A number of teachers on the course have established links with the Biotechnology industry including involvement in spin-out companies and a final-year module Business for Biosciences allows students to gain an understanding of business issues relating to the pharmaceutical and biotechnology industries.

A distinctive feature of the course is the final year research project which provides an important opportunity for students to develop their practical skills to a high level. The modules at Stage 3 are offered by various research institutes within the University and allow students to study in depth areas of particular interest that relate to Newcastle's research strengths.

The programme also places a strong emphasis on employability of its graduates. Students may apply for part time paid employment in one of the research laboratories during their second year of study. Students are also encouraged to undertake a placement in the vacation at the end of Stage 2. *For students undertaking the 4 year programme with industrial placement year there is the opportunity to gain experience in a workplace setting that will add value to their degree and provide a competitive advantage in the job market.*

<b>Programme regulations (link to on-line version)</b>
--

<http://www.ncl.ac.uk/regulations/>

<b>13 Criteria for admission</b>
----------------------------------

**A Levels**

AAA-AAB including Biology. Chemistry is required at AS level (minimum grade B) if not offered at A level. GCSE Mathematics and English Language required (minimum grade B) if not offered at A or AS level. General Studies, Use of Mathematics, Communication and Culture and Critical Thinking not accepted.

**Scottish Qualifications**

AAAAA-AAABB at Higher Grade including Biology and Chemistry. Mathematics and English Language required at grade 2 Standard Grade (or Intermediate 2 equivalent) if not offered at Higher Grade. Combinations of Highers and Advanced Highers accepted.

**International Baccalaureate**

35-36 points with Biology and Chemistry at Higher Level grade 5 or above. Standard Level Mathematics or Mathematical Studies required at grade 4 if not offered at Higher Level.

**Irish Leaving Certificate**

A1A1A1A1B1 at Higher Level, including Biology and Chemistry.

**Access Qualifications**

Overall 60 credits are required with 45 at level 3. The level 3 units must be made up of 15 credits in Biology at Distinction, 15 credits in Chemistry at Distinction and a further 15 credits at Distinction.

**PARTNERS - A Levels**

BBB including Biology. Chemistry is required at AS level (minimum grade B) if not offered at A Level. GCSE Mathematics and English Language required (minimum grade B) if not offered at A or AS level. General Studies and Critical Thinking not accepted.

The PARTNERS Programme is Newcastle University's supported entry route for students from identified schools and colleges. Find out more about the PARTNERS Programme.

**Cambridge Pre-U**

D3, D3, D3 - D3, D3, M2 in Principal Subjects including Biology, and preferably Chemistry. GCSE Mathematics and English Language required (minimum grade B) if not offered at a higher level.

**BTEC Level 5 HND, BTEC (PARTNERS) Level 3 Extended Diploma (formerly BTEC National Diploma)**

Not acceptable for entry to this subject.

***Additional Requirements******Level of English Language capability***

Evidence of English language skills sufficient to complete the programme successfully is required. IELTS scores of no less than 6.5 in any component are the normal requirement.

**14 Support for Student Learning**

The Student Services portal provides links to key services and other information is available at: <http://www.ncl.ac.uk/students/>

***Induction***

During the first week of the first semester students attend an induction programme. New students will be given a general introduction to University life and the University's principle support services and general information about the School and their programme, as described in the Degree Programme Handbook. New and continuing students will be given detailed programme information and the timetable of lectures/practicals/labs/ tutorials/etc.

***Study skills support***

Students will learn a range of Personal Transferable Skills, including Study Skills, as outlined in the Programme Specification. Some of this material, e.g. time management is covered in the appropriate Induction Programme. Students are explicitly tutored on their approach to both group and individual projects. A Faculty Study Skills Advisor provides specialist advice on an individual basis as required to students.

***Academic support***

The initial point of contact for a student is with a lecturer or module leader, or their tutor (see below) for more generic issues. Thereafter the Degree Curriculum Committee Chair, Director of Studies or Head of School may be consulted. Issues relating to the programme may be raised at the Staff-Student Committee, and/or at the Board of Studies.

Additional support with maths and numeracy skills is available from the MathsAid centre within the Robinson Library. Support with writing skills is available from the Royal Literary fund Fellow and from the University Writing Centre.

### *Pastoral support*

All students are assigned a personal tutor whose responsibility is to monitor the academic performance and overall well-being of their tutees.

A good relationship between tutor and tutee is an important part of the pastoral support system. If for any reason a tutee indicates that s/he wishes to change tutor this can be arranged. Some students may prefer to be allocated a tutor of the same gender and students are notified via the Degree Programme Handbook that this can be arranged. There are also course advisors who are available to see students to discuss any issues affecting their studies.

In addition the University offers a range of support services, including the Student Advice Centre, the Counselling and Wellbeing team, the Mature Student Support Officer, and a Childcare Support Officer.

### *Support for students with disabilities*

The University's Disability Support Service provides help and advice for disabled students at the University - and those thinking of coming to Newcastle. It provides individuals with: advice about the University's facilities, services and the accessibility of campus; details about the technical support available; guidance in study skills and advice on financial support arrangements; a resources room with equipment and software to assist students in their studies.

### *Learning resources*

The University's main learning resources are provided by the Robinson and Walton Libraries (for books, journals, online resources), and Information Systems and Services, which supports campus-wide computing facilities.

All new students whose first language is not English are required to take an English Language test. This is administered by INTO on behalf of Newcastle University. Where appropriate, in-session language training can be provided. The INTO Newcastle University Centre houses a range of resources for learning other languages which may be particularly appropriate for those interested in an Erasmus exchange.

## **15 Methods for evaluating and improving the quality and standards of teaching and learning**

### *Module reviews*

All modules are subject to review by questionnaires which are considered by the Board of Studies. Changes to, or the introduction of new, modules are considered at the relevant Curriculum Committee and at the Board of Studies. Student opinion is sought at the Staff-Student Committee and/or the Board of Studies. New modules and major changes to existing modules are subject to approval by the Faculty Teaching and Learning Committee.

### *Programme reviews*

The Board of Studies conducts an Annual Monitoring and Review of the degree programme and reports to Faculty Teaching and Learning Committee.

### *External Examiner reports*

External Examiner reports are considered by the Board of Studies. The Board responds to these reports through Faculty Teaching and Learning Committee. External Examiner reports are shared with institutional student representatives, through the Staff-Student Committee.

### *Student evaluations*

All modules, and the degree programme, are subject to review by student questionnaires. Informal student evaluation is also obtained at the Staff-Student Committee, and the Board of Studies. The National Student Survey is sent out every year to final-year undergraduate students, and consists of a set of questions seeking the students' views on the quality of the learning and teaching in their HEIs. With reference to the outcomes of the NSS and institutional student satisfaction surveys actions are taken at all appropriate levels by the institution.

*Mechanisms for gaining student feedback*

Feedback is channelled via the Staff-Student Committee and the Board of Studies.

*Faculty and University Review Mechanisms*

The programme is subject to the University's Internal Subject Review process.

## **16 Regulation of assessment**

*Pass mark*

The pass mark is 40 (Undergraduate programmes)

*Course requirements*

Progression is subject to the University's Undergraduate Progress Regulations (<http://www.ncl.ac.uk/regulations>) and Undergraduate Examination Conventions (<http://www.ncl.ac.uk/regulations/docs/2013.html>). In summary, students must pass, or be deemed to have passed, 120 credits at each Stage. Limited compensation up to 40 credits and down to a mark of 35 is possible at each Stage and there are resit opportunities, with certain restrictions.

*Weighting of stages*

The marks from Stages 2 and 3 will contribute to the final classification of the degree.

The weighting of marks contributing to the degree for Stages 2 and 3 is 1:2

*The placement year mark does not contribute to the final classification of the degree, but must be satisfactory for students to proceed on the 4-year programme. Any students whose performance in the placement year is deemed unsatisfactory will be transferred to J700.*

*Common Marking Scheme*

The University employs a common marking scheme, which is specified in the Undergraduate Examination Conventions, namely

	<b>Honours</b>	<b>Non-honours</b>
<40	Fail	Failing
40-49	Third Class	Basic
50-59	Second Class, Second Division	Good
60-69	Second Class, First Division	Very Good
70+	First Class	Excellent

*Role of the External Examiner*

An External Examiner, a distinguished member of the subject community, is appointed by Faculty Teaching and Learning Committee, after recommendation from the Board of Studies.

The External Examiner is expected to:

- See and approve examination papers
- Moderate examination and coursework marking
- Attend the Board of Examiners
- Report to the University on the standards of the programme

In addition, information relating to the programme is provided in:

The University Prospectus (see <http://www.ncl.ac.uk/undergraduate/>)

The School Brochure (contact [enquiries@ncl.ac.uk](mailto:enquiries@ncl.ac.uk))

The University Regulations (see <http://www.ncl.ac.uk/regulations>)

The Degree Programme Handbook

Please note. This specification provides a concise summary of the main features of the programme and of the learning outcomes that a typical student might reasonably be expected to achieve if she/he takes full advantage of the learning opportunities provided. The accuracy of the information contained is reviewed by the University and may be checked by the Quality Assurance Agency for Higher Education.

## Annex

### Mapping of Intended Learning Outcomes onto Curriculum/Modules

				Intended Learning outcomes			
	Module title	Credits	Type	A	B	C	D
<b>Stage 1</b>							
BGM1002	Biochemistry	15	Core	1	1,2,3	5	1,2,3
CMB1004	Cell Biology	15	Core	1	1,2,3	5	1,2,3
BGM1004	Genetics	15	Core	1	1,2,3	5	1,2,3
CMB1005	Practical Skills in Biomedical & Biomolecular Sciences 1	15	Core	1	1,2,3	5	1,2,3
PED1003	Pharmacology	15	Core	1	1,2,3	5	1,2,3
PDS1002	Physiology	15	Core	1	1,2,3	5	1,2,3
CMB1003	Microbiology & Immunology	15	Core	1	1,2,3	5	1,2,3
CMB1006	Practical Skills in Biomedical & Biomolecular Sciences 2	15	Core	1	1,2,3	5	1,2,3
<b>Stage 2</b>							
CMB2002	Cell & Molecular Biosciences	20	Com	1		1,2,3,4,5	1,2,3,4
CMB2003	Molecular Medicine	20	Com	1		1,2,3,4,5	1,2,3,4
CMB2004	Infectious disease: the immune response and anti-microbial chemotherapy	10	Com	1		1,2,3,4,5	1,2,3,4
CMB2005	Practical skills in biomedical and biomolecular sciences 3	10	Com	1	1,2,3	1,2,3,4,5	1,2,3,4
BGM2056	DNA replications, recombination and repair	10	Com	1,2,3	1,2,3,4	1,2,3,4,5	1,3,4,5
BGM2060	Proteins and enzymes	20	Com	1,2,3	1,2,3,6	1,2,3,4,5	1,3,4,5,6,7
BGM2061	Protein trafficking and biological membranes	20	Com	1,2,3	1,2,3,6	1,2,3,4,5	1,3,4,5,6,7
BGM2062	Advanced protein analysis	10	Com	1,2,3	3,4,5,6	1,2,3,4,5	1,2,3,4,5,6
<b>Industrial placement year (4 year programme only)</b>							
	Industrial placement	120	Com	4,5	7	6	8
<b>Stage 3</b>							
CMB3000	Project	40		3	1,2,3,4,5,	1,2,3,4,5	1,2,3,4,5,6

Or CMB3001	Experimental design and the process of research	40	Com	3	6  1,2,3,4,5,6	1,2,3,4,5	,7  1,2,3,4,5,6,7
BGM3009	Protein DNA Interactions	10	Com	2,3	4,5,6	1,2,3,4,5	1,2,3,4,5,6
BGM3037	Plant and Animal Biotechnology	10	Com	1,2,3		1,5	1,2,3
BGM3038	Structural and Molecular Biology in Biotechnology	10	Com	2,3	4,5,6	1,2,3,4,5	1,2,3,4,5,6
BGM3039	Medical Biotechnology	20	Com	2,3	4,5	1,2,3,4,5	1,2,3, 6
BGM3046	Research in Biochemistry and Genetics	10	Com	1,3	2,4,5	2,4,5	1,2,3,7
BGM3057	Integrated biochemistry	10	Com	2,3	4,5,6	1,2,3,4,5	1,2,3,4,5,6
BMS3003	Business for the Bioscientist	10	Com	3	4,5	1,2,3,4,	6
